

AK CONCERTS — MASTER SHEET GUIDE

PART 2: Scraper Auto-Ingestion & Data Normalization Protocol

■ Overview

This guide details how incoming automated scraper data from 20+ Alaska event sources (Facebook events, venue websites, Eventbrite, regional calendars) and manual submissions are normalized, deduplicated, and formatted within the Master Sheet pipeline.

1. Mandatory Data Formatting Rules

To maintain high data quality across 3,500+ static site pages, all incoming rows must adhere to these standards:

Required Format	Example	Incorrect Format
YYYY-MM-DD` ISO format	`2026-08-22`	`8/22/26` or `Aug 22`
Full AM/PM string	`6:00 PM - 10:00 PM` or `9:00 PM`	`6pm-10pm` or `20:00`
Exact Alaska City Name	`Anchorage`, `Juneau`, `Homer`	`anchorage ak` or `ANC`
Standardized Venue Title	`Williwaw Social`	`Williwaw Bar & Grill`
Lowercase predefined slug	`music`, `comedy`, `festival`	`Live Band` or `SHOW`

2. Deduplication & Unique Identifier Key

The build pipeline generates a unique hash key for every incoming event:

```
uniqueKey = lowercase(Title) + "|" + lowercase(Venue) + "|" + lowercase(City) + "|" + Date
```

Deduplication Rules:

- If a scraper imports an event that matches an existing **uniqueKey**, the record is deduplicated.
- If details differ (e.g. ticket price or updated description), the Master Sheet record overrides the scraped fallback.

3. Alaska City & Coordinate Mapping

When scrapers import events from new venues, the pipeline automatically maps the venue to one of the 14 major Alaska regional coordinate centers:

- Anchorage: **[61.2181, -149.9003]**
- Fairbanks: **[64.8378, -147.7164]**

- Juneau: [58.3019, -134.4197]
 - Homer: [59.6425, -151.5483]
 - Palmer: [61.5997, -149.1100]
 - Wasilla: [61.5814, -149.4394]
 - Seward: [60.1042, -149.4422]
 - Girdwood: [60.9422, -149.1678]
 - Talkeetna: [62.3208, -150.1066]
 - Kenai / Soldotna: [60.5544, -151.2583]
-

4. Automated CSV Export Configuration

To allow the build script to read the sheet automatically:

1. In Google Sheets, click **File** → **Share** → **Publish to web**.
2. Under Link, select **Entire Document** (or **Approved Events** tab) as **Comma-separated values (.csv)**.
3. Click **Publish** and copy the public CSV URL.
