

AK CONCERTS — MASTER SHEET GUIDE

PART 3: Moderation, Approval Workflow & Quality Control

■ Overview

This guide provides operational procedures for site operators (Cody / Moderation Team) to review pending submissions, audit concert data, edit listings, and approve shows for automatic production deployment.

1. Moderation Status States

Every row in the Master Google Sheet contains a **Status** column with one of three valid state values:

Status	Meaning	Live Production Behavior
`Pending`	Newly submitted show or raw scraper import requiring human audit	**EXCLUDED** from site build
`Approved`	Verified show title, date, venue, and city	**INCLUDED** in live site build
`Rejected`	Spam submission, duplicate entry, or cancelled event	**EXCLUDED** from site build

2. Daily Moderation Checklist (Step-by-Step)

- Filter by Pending:** In the Master Google Sheet, set a filter on Column M (**Status**) to show only **Pending** rows.
- Verify Event Details:**
 - Check that **Title** is spelled correctly (e.g. **"Blackwater Railroad Company"**).
 - Verify **Date** is formatted as **YYYY-MM-DD**.
 - Confirm **City** matches an actual Alaska municipality.
 - Verify **Venue** exists or add a venue slug if it is a new Alaska location.
- Change Status:**
 - If valid, change **Status** column cell to **Approved**.
 - If invalid or spam, change **Status** column cell to **Rejected**.
- Trigger Live Build:**
 - Once marked **Approved**, the site will include the event on the next scheduled build or manual deployment run.

3. Handling Venue Claims & Band Profiles

- **New Venue Claims:** When a venue owner submits a claim via `/submit`, verify their contact email in Column J. Once verified, update the official venue metadata in `venues.json`.
- **New Artist Profiles:** When a new local Alaska band is submitted, add their bio and social media handles to `src/data/bands.ts` to generate their dedicated `/bands/[slug]` profile page.
